The FHWA, Indiana LTAP, and the Hamilton County Highway Department will be hosting an Every Day Counts (EDC) Showcase on the technology of GRS-IBS. GRS-IBS technology uses alternating layers of compacted granular fill material and fabric sheets of geotextile reinforcement to provide support for the bridge. Some advantages of using GRS-IBS include reduced construction time and cost as well as, easy construction with common equipment and materials. The day will start with a presentation on the construction and the technology of GRS-IBS and the implementation in Hamilton County. The presentation will be held at the Hamilton County Commissioners Room. After the presentations we will proceed out to the construction site where attendees will be able to see and feel the materials and observe the contractor build the GRS walls. Attendees will be required to bring their own personal protective equipment (hardhat, safety vest, and safety shoes).

Registration: please visit: LTAP’s Website

When: June 1, 2016 (Before the IACHES conference starts)
Where: Hamilton County Commissioners Courtroom & Bridge 299 (221st Street)
Time: 8:00 am – 12:00 pm
